

OutSys

Hardcoded Quality

TelcOS

OutSys delivers innovative carrier-grade solutions and services to implement, simplify, and speed up the integration, provisioning, management, and testing processes in the Broadband Service Providers Networks and their Information Technology Systems

Active Member of the Broadband-Forum

Solution

TelcOS

Telephone Network Connectivity Verification Solution

**TelcOS is part of the
Testing and Probing
Field and Production
Solutions Portfolio**

Introduction

TelcOS verifies in real-time the actual state of telephone connectivity by performing a matrix of calls and providing their audio and flow analysis with their termination causes

Technologies

**Calls are generated using several
Telephone Technologies:
ISDN, TCP/IP-VoIP-SIP, and Mobile 4G/5G
to verify the correct interworking
of heterogeneous
Telephone Networks**

Uses and Benefits

Status and Verification of:
Terminals State
Number Portability
Value Added Services (VAS)
Non-Geographic Numbering
Interworking Routing

**TelcOS has its own administrative
WebGUI Dashboard**

**It also exposes an extensible
REST-API interface for an easy
integration with other Provisioning
and Verification Systems**
