

OutSys

Hardcoded Quality

FactOS

About Us

OutSys delivers innovative carrier-grade solutions and services to implement, simplify, and speed up the integration, provisioning, management, and testing processes in the Broadband Service Providers Networks and their Information Technology Systems

Active Member of the Broadband-Forum

Solution

FactOS

Fully Automated
CPEs & IP-Devices

Testing
Solution

Portfolio

**FactOS is part of the
CPEs, IP Devices, and
Network Services
Laboratory Testing
Solution Portfolio**

Mode

AUTOMATION
is essential
to achieve testing
speed, accuracy,
consistency
and repeatability

Paradigm

Figure 1

RFC 2544 Basic Layout

... The ideal way to implement this series of tests is to use a tester with both transmitting and receiving ports. Connections are made from the sending ports of the tester to the receiving ports of the DUT and from the sending ports of the DUT back to the tester ...

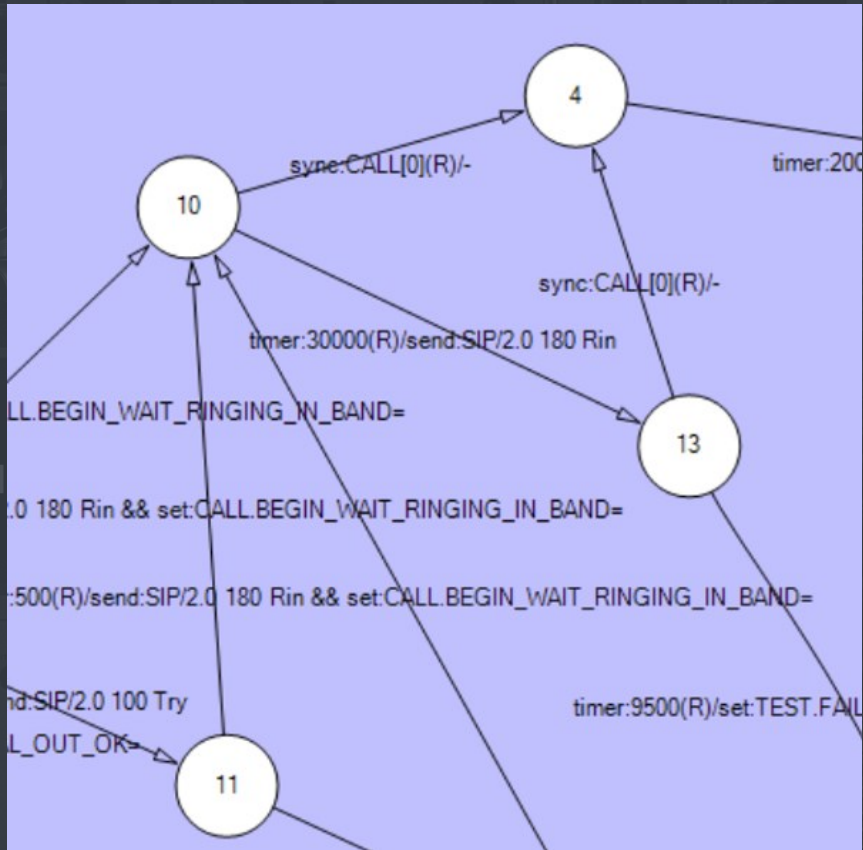

Virtualization

**Implementing
Network Software
Defined Objects
extends the RFC 2544
testing paradigm
to all the DUT
testing areas**

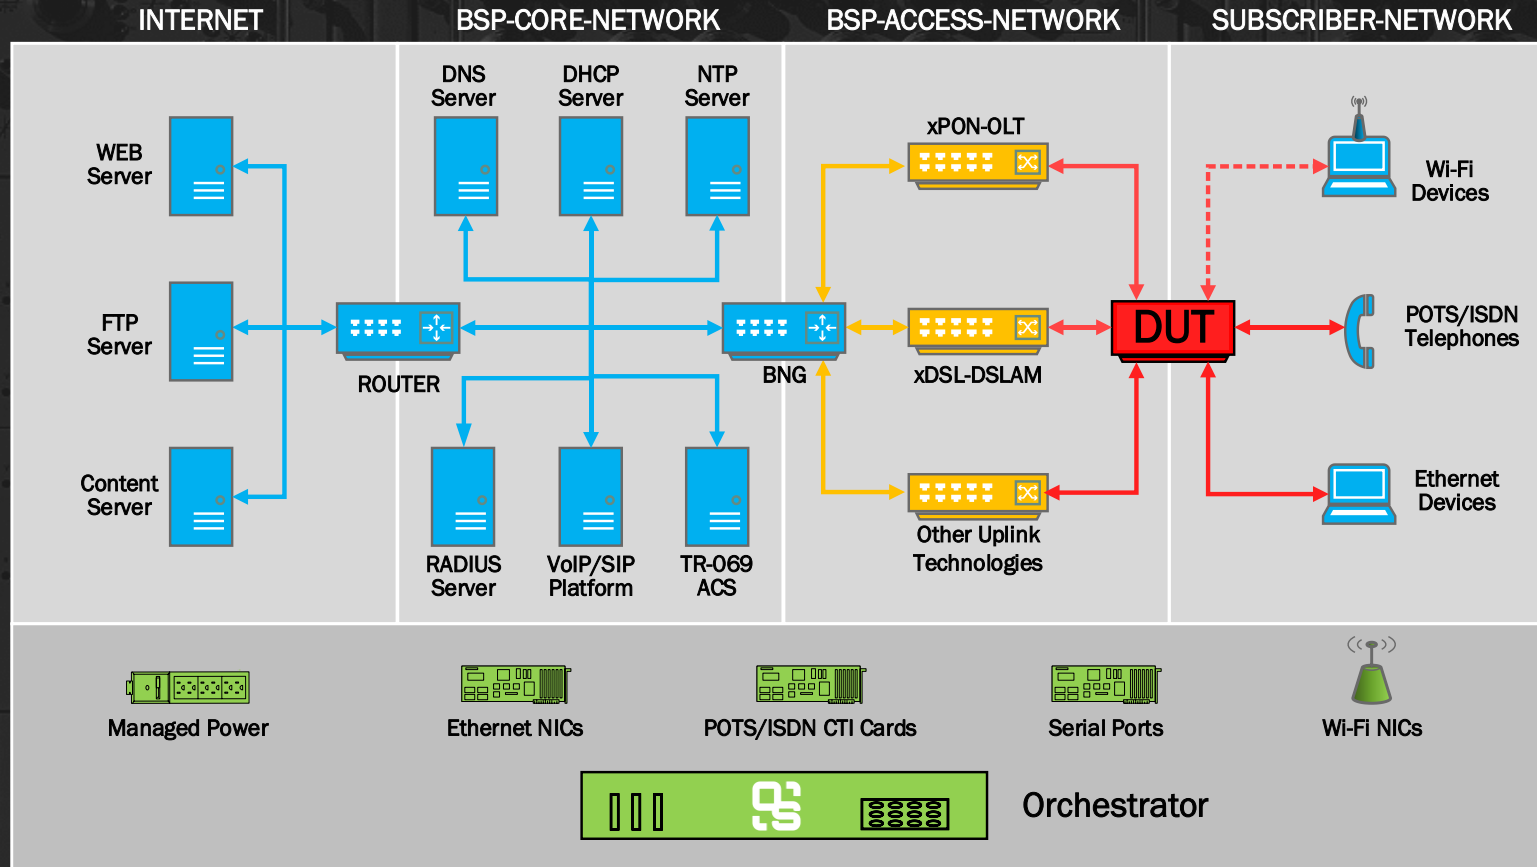

NSDOs

All Network Software Defined Objects are implemented from Layer-2 and have their own programmable State Machine

Virtualized Test Bench Schema

**FactOS
Testing
Platform**

● FactOS Built-In Physical Objects

● FactOS Software Defined Objects

● FactOS Managed Physical Objects

● Device Under Test

Pros & Cons

Pros:

Repeatability – In-Depth

Scalability – Speed

Cost-Effective

Cons:

Not End-2-End

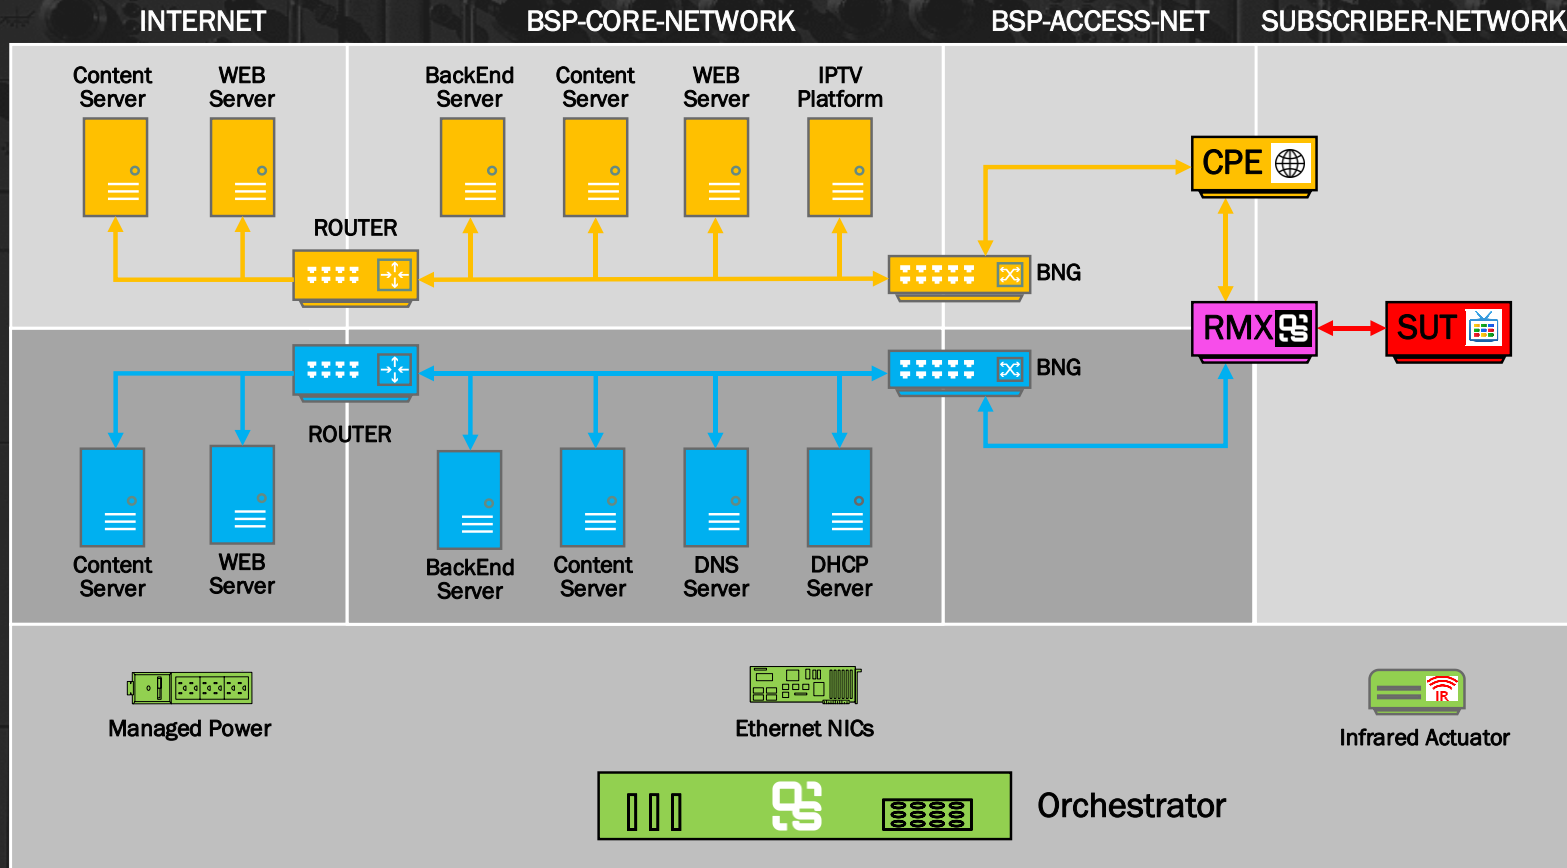

Hybridization

**A Realm-Mixer Agent
is used to achieve a
Hybrid-Testing Platform with
Software Defined Objects
and Real Network
Objects & Services**

Hybrid Test Bench Schema

Testing
Platform**

 FactOS Built-In Physical Objects

 FactOS Software Defined Objects

 FactOS Realm Mixer

 Network Physical/Real Objs

 Set-Top-Box Under Test

Test Portfolio

Hundreds of test available:

Stack IPv4 & IPv6

IPOE (DHCP) / PPPoE

NTP – TR-069 Management

DHCP-Server – NAT – 6rd

VoIP SIP

etc.

New Tests

FactOS is a flexible and extensible framework that allows the development of new tests in a easy, fast, and straightforward way

Areas

Testing Areas:

Functional
Interoperability
Performance
Load
Stress
Security

Areas

Functional Testing
is the process of determining
the DUT subsystems
compliance and adherence to
standard and custom
protocols & requirements

Areas

Interoperability Testing

is the process of determining
if the DUT subsystems
can work in conjunction with
other software and hardware
systems

Areas

Performance Testing
is the process of determining
the DUT subsystems
speed and efficiency

Areas

Load Testing
is the process of determining
the DUT subsystems
behavior under normal
and peak workload
conditions

Areas

Stress Testing
is the process of determining
the DUT subsystems
long-term stability
and reliability

Areas

Security Testing
is the process of determining
if the DUT subsystems
are flawed, vulnerable,
and/or penetrable

T&RC

CPE Test & Regeneration Center

On average less than one out of ten CPEs replaced in the field has hardware issues

A FactOS version is available to verify all the CPE hardware subsystems and upgrade their firmware to optimize and speed up the refurbishing process

FactOS

**Available as
Turn-Key or Testing-as-a-Service
Solution**
